AMENDMENTS TO THE CLAIMS

- 23. (Currently Amended) A method comprising:

 exposing a plurality of photodiodes of an image sensor to a light source; and

 modifying a light receiving area of a first photodiode and a second photodiode by the use of

 one or more light shields, such that, for a given size of light receiving area, a first photodiode is

 exposed to a greater amount of incident light than a second photodiode.
- 24. (Previously Presented) The method of claim 23, wherein modifying the light receiving area comprises modifying on the basis of a responsivity of a color assigned to one of the first photodiode and the second photodiode.
- 25. (Previously Presented) The method of claim 23, wherein modifying the light receiving area comprises masking a portion of one of the first photodiode and the second photodiode from incident light.
- 26. (Previously Presented) A method comprising:

 providing an image sensor comprising a plurality of pixels;

 modifying a light receiving area of alternate pixels by the use of one or more light shields,
 such that, for a given size of light receiving area, a first pixel is exposed to a greater amount of
 incident light than a second pixel; and
 capturing an incident light.
- 27. (Previously Presented) The method of claim 26, wherein modifying the light receiving area comprises modifying on the basis of a responsivity of a color assigned to one of the first pixel and the second pixel.
- 28. (Previously Presented) The method of claim 26, wherein modifying the light receiving area comprises masking a portion of one of the first pixel and the second pixel from the incident light.
